MODULES A TO I

Which module should you start with?

Every module is a complete unit of 4 or 5 lessons that ends in a performance. You can start with any of them, and you don't need a STEM or dance background. Use these three questions to pick the one that fits your students and your space.

1. How old are your students?

Grades 6 to 10: any module works.

Grades 3 to 5: start with **C**. It's built for younger grades.

Grades 11 to 12: any module, with the stretch notes in each guide.

2. How much tech do you have?

One screen for you: **D, E or H**.

A device per pair for one lesson: **C or I**.

A computer per student or pair: **A, B, F or G**.

3. What lights your students up?

AI and tech: **A, D, I**

Social media: **B**

Music, sound and physics: **C, G**

Climate and justice: **E, F**

Design and fashion: **H**

All nine at a glance

MODULE	NAME	THEME	GRADES	LENGTH	TECH
A	Afrobeats & AI	AI and music	6 to 10	4 lessons	Heavy
B	Reggaeton, Algorithms & Virality	Social media	6 to 10	4 lessons	Heavy
C	Rhythm, Rotation & Radical Moves	Physics and music	5 to 8 (adaptable 3 to 4)	5 lessons	Some
D	Break Dance Machine	AI and hip-hop	6 to 10	4 lessons	Light
E	Carbon Footstep	Climate	6 to 10	5 lessons	Light
F	No Breath, No Justice	Health and justice	6 to 10	4 lessons	Heavy
G	Speakerboxx	Sound and engineering	6 to 10	4 lessons	Heavy
H	Dance Shoe Design	Design and fashion	6 to 10	4 lessons	Light
I	ChoreoGPT	AI and storytelling	6 to 10	4 lessons	Some

Not sure? Module A is SFD's suggested first module. If tech is tight or your students are younger, start with D, E or C instead. Lessons run about 90 minutes and split into two 45-minute blocks.

MODULES A TO E

The modules, one by one

A MODULE — Afrobeats & AI

4 lessons · Heavy tech

Music, Movement & Machine Learning

AI is a co-pilot, not an autopilot.

STEM	DANCE	FINALE	YOU NEED
AI basics, prompt engineering, training a model, AI bias	Afrobeats rhythms: polyrhythm and clave	A crew dance to a music track students create with AI	A computer per student or pair, internet, headphones. Ask IT to unblock the AI tools.

B MODULE — Reggaeton, Algorithms & Virality

4 lessons · Heavy tech

Decoding the Feed, Designing the Future

Someone designed the algorithms in your feed, and someone can redesign them.

STEM	DANCE	FINALE	YOU NEED
Recommendation algorithms, engagement signals, data privacy	Reggaeton and the dembow rhythm	A TikTok-ready crew video with a message about algorithms	A computer per student or pair, Canva, a device that can film, and media permission.

C MODULE — Rhythm, Rotation & Radical Moves

5 lessons · Some tech

Hoop Dancing & the Physics of Percussion

Movement is science in action.

STEM	DANCE	FINALE	YOU NEED
Centripetal force, friction, sound waves, engineering design	Hula hoop routines and percussion	A performance with homemade instruments and hula hoop routines	Hula hoops in 3 sizes, cans or containers, and a device with a microphone per pair for one lesson.

D MODULE — Break Dance Machine

4 lessons · Light tech

Where Breaking Meets Machine Learning

Machine learning is something a person designs, by giving a computer examples.

STEM	DANCE	FINALE	YOU NEED
Machine learning, training data, image classification, bias	Breaking and its cultural roots	A Breaking Battle cypher where crews show their three trained moves	One facilitator laptop with a webcam and a shared screen. Works without a camera, too.

E MODULE — Carbon Footstep

5 lessons · Light tech

Step Dance for the Climate Generation

Climate change is about who gets to take up space.

STEM	DANCE	FINALE	YOU NEED
Carbon footprint, reading data, individual vs. systemic action	Step, from HBCU and Divine Nine traditions	An original step routine with a student-written climate chant	One screen for videos, open floor space and a speaker. Offline by design.

MODULES F TO I

The modules, one by one

F MODULE

No Breath, No Justice

4 lessons | Heavy tech

Respiratory Science, Environmental Justice & Advocacy

The air quality in your neighborhood is not an accident.

STEM
The respiratory system, experiments and data, the Air Quality Index

DANCE
Just Dance-inspired choreography

FINALE
A crew advocacy routine performed for the class

YOU NEED
A computer per student or pair, headphones, and plastic bottles for a lung model.

G MODULE

Speakerboxx

4 lessons | Heavy tech

Sound You Can Feel. Sound You Can Build.

Sound is vibration, and vibration is movement.

STEM
Frequency, amplitude, electromagnetic induction, building a speaker

DANCE
Dance traditions from around the world

FINALE
A homemade paper plate speaker, plus a movement showcase

YOU NEED
A computer per student or pair, a large speaker, and magnets and copper wire ordered a week ahead.

H MODULE

Dance Shoe Design

4 lessons | Light tech

Engineering, Empathy & the Sole of Dance

Every shoe is an engineering solution.

STEM
Material science, friction, design thinking, prototyping

DANCE
Movement demos of each shoe design

FINALE
A dance shoe prototype or blueprint, pitched in the Sole Showcase

YOU NEED
A facilitator device and projector, craft supplies, and donated shoes if you have them.

I MODULE

ChoreoGPT

4 lessons | Some tech

AI, Choreography & the Stories Only You Can Tell

AI is not the artist. You are.

STEM
Human-computer interaction, prompt engineering

DANCE
Choreography tools: motif, canon, ABA form

FINALE
Crew choreography shaped with ChoreoGPT, performed in the Story in Motion Showcase

YOU NEED
A facilitator device and projector, student devices with cameras, and ChoreoGPT teacher access.

Ready to start? Open the module in Disco and finish its Start Here items. Its lessons unlock after that. Questions? Bring them to Club Support Hours or email partnerships@stemfromdance.org.
